

This Lake Association has swimming lanes that are 25 Meters long set between two docks.
They have Eurasion Milfoil in the lanes and the kids don't like it.

To handle this area you can use 6 – 80 foot long LBB's overlapping (custom). Installed Parallel to the shoreline. Install early in the spring and remove by July 1st and you should have a clear area all summer.

Other Options: Purchase 6 – LBB40's and install them in the shallower end of the lanes in May and move them to the other lanes at the end of June. This reduces your cost by 55%.

This install cost is about \$3400.00 with shipping and the cost of rebar. It's giving you a Massive 80' x 60 area to swim (4800 Sq. feet). In contrast, to do the same with one of our competitors systems you would need (15) 12'x 24' (4320 square feet covered) Is about \$6060.00 all in.
